HOME SLEEP SCREENING

SWC understands that physicians and their staff are busier than ever. Currently, less than 20% of people with sleep disorders are being diagnosed. We believe it's our responsibility to provide physicians with the latest technology to assist with identifying and diagnosing patients who might be suffering with a sleep disorder. Home Sleep Screening is one tool available to physicians when they work with SWC.

- * Physician orders a home sleep screen using fax referral form.
- * We coordinate the set-up of an easy to use, patient-friendly screening device.
- * Your patient will be screened for one night in their home.
- * The results of the overnight screen will be delivered back to the physician.
- * In the event the results indicate sleep disordered breathing the patient can be scheduled for a sleep study within 7-10 days.
- * There is no charge for the sleep screen.
